Career OS

AI-Powered Career Intelligence

Built for the modern job seeker who is **tired of guessing** — and ready to win.

Made with GAMMA

THE PROBLEM

Job Hunting in 2025 Is Broken

Not because opportunities don't exist — but because **candidates operate blind.**

Resumes Into a Void

Candidates submit applications with no idea how an ATS or hiring manager actually reads them.

Interviews Without Feedback

They walk out of interviews not knowing why they failed — and repeat the same mistakes.

Skills Without Context

They apply to roles without knowing whether their skills are even competitive in today's market.

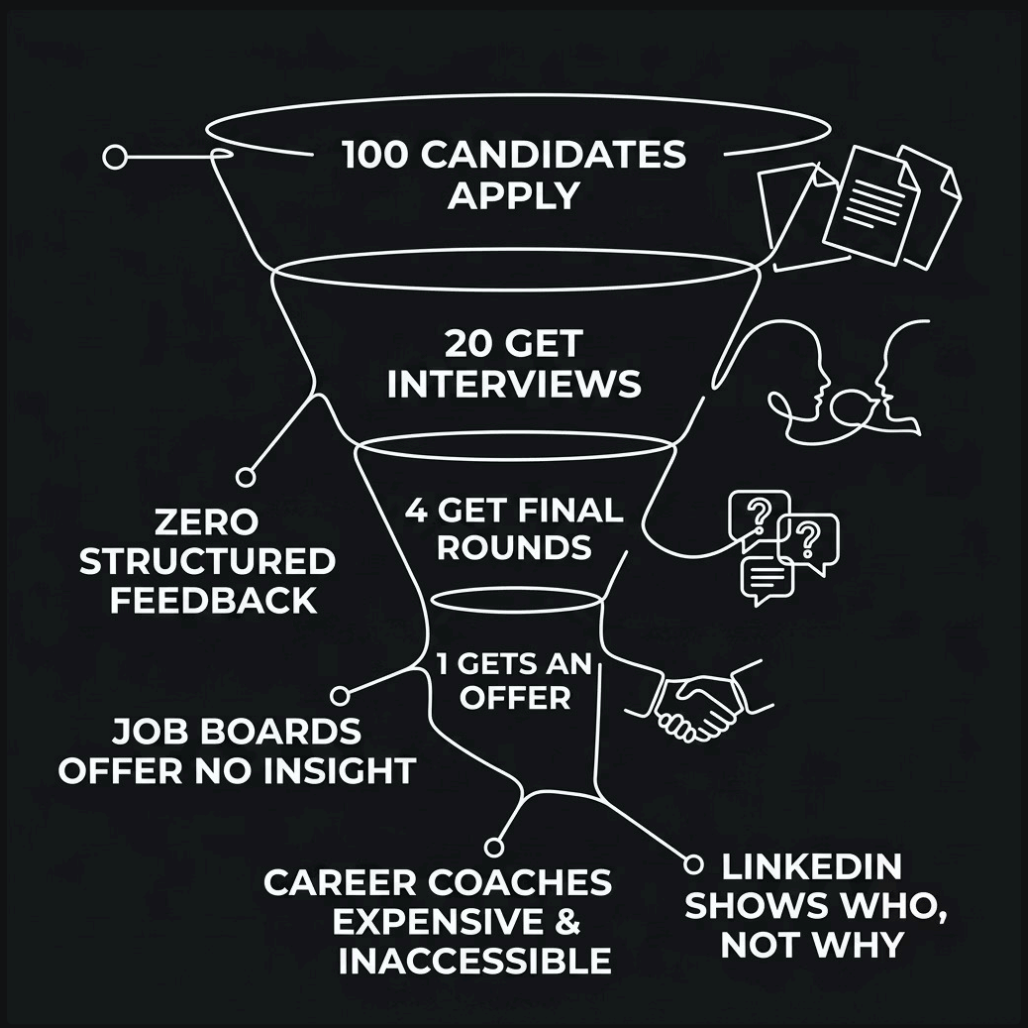
Stories Without Structure

On LinkedIn, in portfolios, in pitches — they can't connect their technical work to a compelling narrative.

Made with GAMMA

THE PROBLEM — THE NUMBERS

The Gap Between "I Applied" and "I Got the Offer" Is a Black Box



Every year, **millions of candidates** go through hundreds of applications, rejections, and interviews with almost zero structured feedback.

⚠ **The result:** Talented people lose opportunities not because of what they lack — but because they lack the **right intelligence at the right moment.**

Career Coaches

Expensive and inaccessible to most candidates

Job Boards

Give listings — but zero insight into why you win or lose

LinkedIn

Tells you who got hired — never why

Made with GAMMA

THE SOLUTION

Career OS Tears Open the Black Box

A full-stack, AI-augmented career intelligence platform with **five deeply integrated analysis engines** — each targeting a specific failure point in the job search lifecycle.

Hiring Manager Lens

Resume intelligence & ATS scoring

Interview Rebound

Post-interview autopsy & coaching

Skill Arbitrage

Market intelligence & gap analysis

Persona Play

AI mock interviewer archetypes

Narrative Architect

GitHub-to-story builder

Made with GAMMA

FEATURES 1 & 2

Resume Intelligence + Interview Autopsy

Feature 1 — Hiring Manager Lens

Upload your resume and a job description. The engine scores across four dimensions: **Visual Hierarchy** (eye-tracking via OpenCV), **ATS Integrity**, **Semantic Match** (NLP alignment), and **Competitive Benchmark**. Gemini 2.0 Flash generates coaching recommendations with a "Ready to Apply" badge and version history.

Feature 2 — Interview Rebound

After any interview, log your notes or upload a transcript. The engine performs a full autopsy: **technical depth scoring**, behavioral signal analysis, tone mapping, and a strategic action plan. AssemblyAI handles transcription; Gemini generates a personalized debrief with scheduled reminders.

Made with GAMMA

FEATURE 3

Skill Arbitrage — Know Your Market Before You Apply

Enter a target role and region. Career OS pulls **live job market data** (Adzuna) and delivers:

Market Snapshot

Demand/supply clustering, salary mapping, remote market analysis

Skill Gap Radar

Compare your skills against the top 10% of candidates in your role category

Skill Sprint

Day-by-day learning plan with quizzes and resume injection snippets

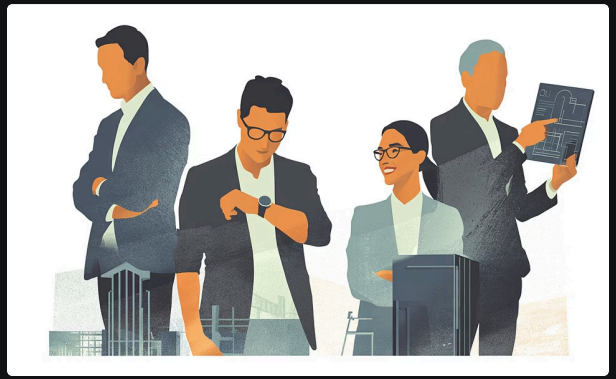
ROI Report

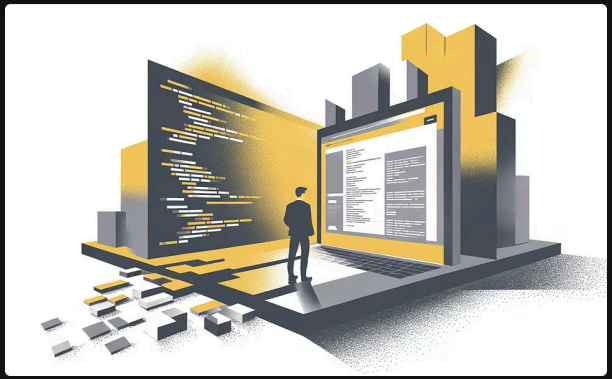
Callback probability uplift and lifetime earnings delta from closing specific gaps

Made with GAMMA

FEATURES 4 & 5

Practice Like the Real Thing. Tell Your Story With Precision.





Feature 4 — Persona Play

Practice against four AI interviewer archetypes: **Stone-Faced Architect** (deep pressure, minimal feedback), **Rushed Founder** (high-speed interruptions), **Non-Tech HR** (clarity stress test), and **Deep-Diver** (layered why-question chains). Sessions are tailored to your target role, with real-time coaching hints and a final synthesis report.

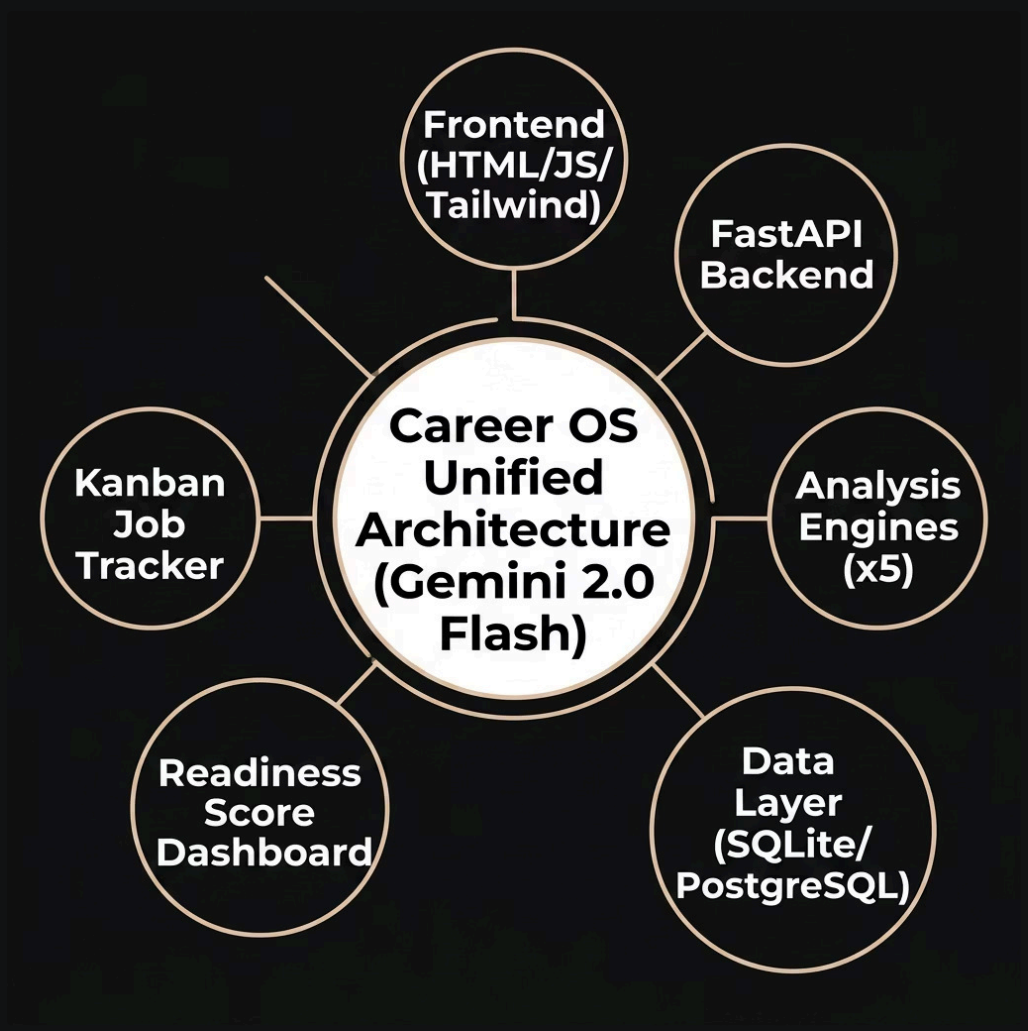
Feature 5 — Narrative Architect

Point the engine at your GitHub repo, paste your resume and LinkedIn. It analyzes your codebase architecture, builds a **problem-solution narrative** from your actual project work, generates interview talk tracks, identifies gaps between your GitHub reality and resume claims, and exports LinkedIn posts, portfolio content, and a cross-platform consistency check.

Made with GAMMA

PLATFORM ARCHITECTURE

One Unified Readiness Score. Five Engines Working in Concert.



Every feature feeds a **unified Readiness Score** — a composite of your resume score, interview autopsy score, and skill gap match score. The Kanban job tracker ties applications to specific analyses so you can see which resume version you used for which company and what happened.

Graceful Degradation

Every Gemini call has a fallback of llama, llama has a heuristic fallback — the platform works without an API key

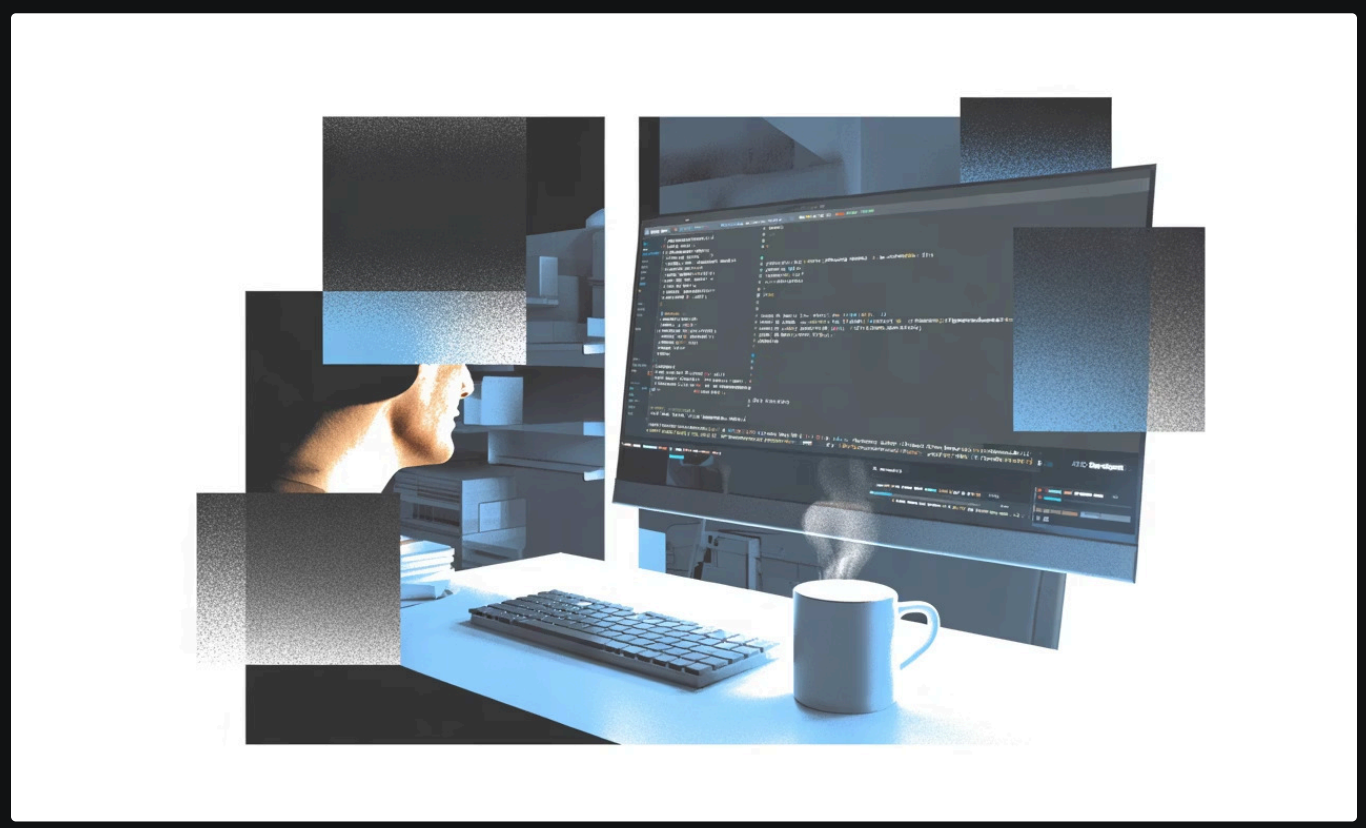
Cross-Feature Data Reuse

Resume text parsed once is reused across features, eliminating redundant uploads

Made with GAMMA

TECH STACK

Built to Scale — Modern, Modular, Production-Ready



Backend	Python 3.12, FastAPI, SQLModel
AI Layer	Google Gemini 2.0 Flash , llama
Transcription	AssemblyAI
Job Market Data	Adzuna API
Computer Vision	OpenCV, NumPy
PDF Processing	PyMuPDF, ReportLab
Frontend	Vanilla JS, Tailwind CSS
Database	SQLite (dev)
Containerization	Docker, Docker Compose

All AI calls are **best-effort with graceful degradation** — if Gemini is unavailable, shift to Ollama , if it is unavailable heuristic results are returned without failure. Rate limiting and security headers are production-ready out of the box.

Made with GAMMA

THE VISION

The Right Intelligence at the Right Moment

Talented people lose opportunities not because of what they lack — but because they lack visibility into the process. **Career OS changes that.**

For Candidates

Stop guessing. Know exactly what to fix, practice against real archetypes, and tell your story with precision.

For the Market

Millions of job seekers. Zero structured feedback at scale. Career OS is the infrastructure layer for modern career intelligence.

What We're Raising

Seed funding to scale our AI engine, expand market data integrations, and bring Career OS to the millions who need it.
